

(State and county codes and work sheet serial number)

DETERMINATION OF FOOD AND FEED REQUIREMENTS FOR HOME CONSUMPTION NEEDS ¹

Required in twelve-month period for— A	Average number for farm in 1937 B	Requirement per unit of land C	Total grain required D	Principal kind of grain used		Acreage required to produce the needed grain (D ÷ F) G
				Name E	Average yield on this farm F	
1. Persons.....	XX	XX	XX	XX	XX	XX
2. Livestock and livestock products ²						
(a) Workstock.....						
(b) Dairy cows.....						
(c) Other cattle.....						
(d) Hogs.....						
(e) Poultry.....						
(f)						
3. TOTAL.....	XX	XX	XX	XX	XX	

¹ "Food and feed requirements for home consumption needs" means the amounts of food and feed crops needed for a 12-month period for the farm to furnish food for home use, feed for workstock used on the farm, and feed for other livestock on the farm the products of which are used for food on the farm.

² The standards to be used will be set up in terms of grain requirements for each State set forth in instructions issued by the State committee with the approval of the Director of the Southern Division on the basis of the average requirements for farms in the various areas in the State.

³ For farm use or home consumption.

I hereby certify that the information contained in this table is true and correct to the best of my knowledge and belief.

I certify that to the best of my knowledge and belief the foregoing information is true and correct and that no commercial production is included therein.

INSTRUCTIONS FOR FILLING OUT FORM SR-102

This form to be executed in triplicate by the operator, the original of which will be forwarded to the State office in accordance with instructions to be issued later.

This form is to be filled out *only* in case—

1. The food and feed requirements for home consumption needs for 1937 are not the same as such needs determined in 1936 on a form similar to Form SR-102 and in accordance with instructions similar to those contained herein, or in case—
2. An operator has planted in 1937 an acreage of general crops in excess of the general base established for the farm; or
3. An operator diverts acreage from the general base.

The State and county code numbers and work sheet serial number will be entered in the county office and should correspond with such numbers that appear on Form SR-101 previously submitted by the operator.

The operator, with the aid of the community committeeman, will enter the information called for in column B. This information will be for the farm covered by the work sheet, Form SR-101, and should include the actual number of dairy cows, poultry, etc., which are or will be on the farm in 1937, not in excess of the number which normally would be needed to furnish food for consumption on the farm for a 12-month period. In no event shall commercial production be included.

The figures in column C will be entered in the county office and will be arrived at in accordance with instructions issued by the State committee and approved by the Director of the Southern Division.

The figures in column D will be entered in the county office and will be determined by multiplying the figures in column C by the figures in column B.

The operator will enter in column E the chief grain crop used for food or feed for the applicable item in column A. For instance, corn will in most cases be entered in column E, line (d), opposite "Hogs" as this is the principal kind of grain fed to hogs.

Enter the yield in bushels in column F. This will be obtained from column F, Form SR-1, for those farms covered in 1936 by a work sheet. For those farms not covered in 1936 by a work sheet the yield will be obtained from Form SR-101, column H, subject to adjustments that will result in a yield comparable to the yield as shown on the 1936 work sheet for similar farms in the same community. Where the crop designated in column E is not produced on the farm, the yield to be entered in column F shall be assigned by the community committee. Such yield should be comparable to the yield for similar farms in the same community.

The acreage required to produce the total grain required for the farm, column G, will be entered in the county office and will be determined by dividing the total grain required, column D, by the average yield, column F. Column G will then be added.

The operator should sign in the space provided, which signature should correspond with that on Form SR-101.

If the acreage shown in column G exceeds the acreage in the general base, the operator will not be eligible to receive a class I payment for diverting any acreage from the general base. There will be no penalty for planting in 1937 an acreage equal to the figure in column G, even though such acreage exceeds the general base.

If the acreage in the general base is greater than the total of column G, the operator may make application for a class I payment for diverting from the general base an acreage not in excess of the difference in such acreages, or 15 percent of the general base, whichever is the smaller, pursuant to paragraph 1, subsection (a), section 15 of part II of SRB-101.

The table must be certified to by the operator and the community committeeman assisting the operator in filling out the table.
